

Problems with Virtual Box – VM terminated unexpectedly during Startup

The virtual machine 'ITFSCCM01' has terminated unexpectedly during startup with exit code 1 (0x1).

Rajib Al · 4 days ago

Hello, my name is Robert Hill, and I will be your instructor for this course. You can follow me by subscribing to my newsletter at <http://www.instructorrobert.com>.

Hello Rajib,

Check your I drive, take a look at that vboxhardening.log. You should be able to get a few clues from that log file.

Thanks,

Robert

Are you experiencing the same error with all your VM's? If **you don't have a backup** (clone), uninstall and reinstall your virtual box you may have to rebuild your servers. I have had to do this as well.

Robert

Hi Robert,

I am experiencing same error with all VM's.

I was trying to copy and paste the log but here in the message board says too many words. So how can I send?

Please let me know.

Thanks,

Rajib

Hello Rajib,

No I have never had the problems with my VM servers. If you clone a machine that has problems you will clone the problems.

How much RAM do you have in your main computer? How much hard disk space?

How much RAM are you allocating for your VM server?

Thanks,

Robert

Hi Robert,

A good news for you. I resolved it myself by updating the **Virtualbox to version 5.1.30**.

Thanks for your co-operation.

Now I can go ahead.

Regards,

Rajib

Special thanks to Rajib for submitting this problems to the message board. Then fixing his problems by himself, that is especially great!
