

Creating the Windows 10 Collection

Hello, my name is Robert Hill, and I will be your instructor for this course. You can follow me by subscribing to my newsletter at <http://www.instructorrobert.com>.

For this section we will need to create a collection called **Windows 10**.

Now let's create the **Windows 10** collection from within **Configuration Manager**, using the **direct rule instead of the Query Rule**.

- From ITFSCCM01, open Configuration Manager, from the Workspace click **Assets and Compliance**, right click on **device collections**, click **Create Device Collection**.
- For a name type **Windows 10**, click **browse**, click **ALL Systems**, then click **ok**, then click next.
- Click **Add Rule**, click **Direct Rule**, click next.
- From Attribute name, click the down arrow, at the top select name
- For Value Type ITFWS02, click next
- Click the check box beside ITFWS02, click next, next again several times, then close.

From the List View, Device Collections, double click on the Windows 10 collection, ITFSW02 is displayed.
