

How to Extend the Windows Server 2016 Evaluation Time Period (legally)

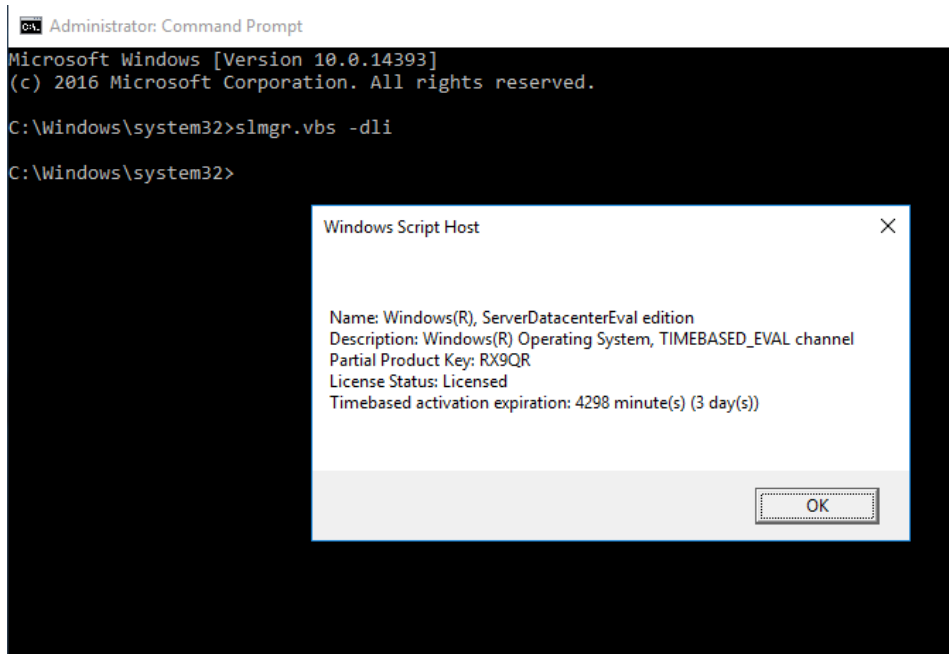

I had 3 days left on my server 2016 evaluation. Here is how to extend that time period.

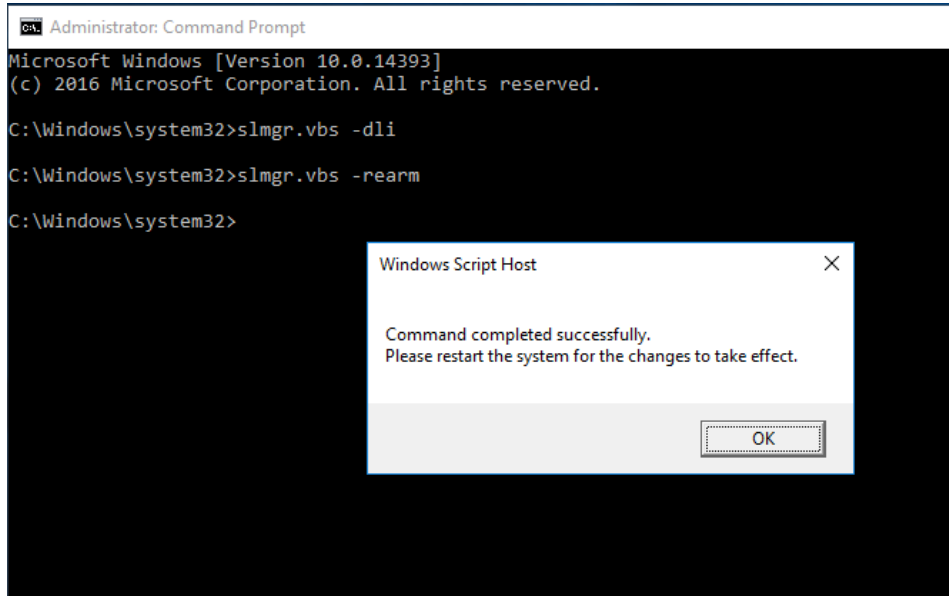

Open an admin level command prompt

To double check the activation expiration date type `slmgr.vbs -dli`, press return.

To extend the time period type `slmgr.vbs -rearm`, press return

Restart the system.

Now you should see – Windows License valid for 180 days
