# Welcome to Problems and Solutions from the Message Board

Rajib submitted a question to the message board. He was having problems downloading ADK to the SCCM server. This question relates to the SCCM Section, specifically the lecture entitled Installing the Windows Assessment and Deployment Kit.

When Rajib tried to download the ADK software he received the following error " Your current security settings do not allow this file to be downloaded"

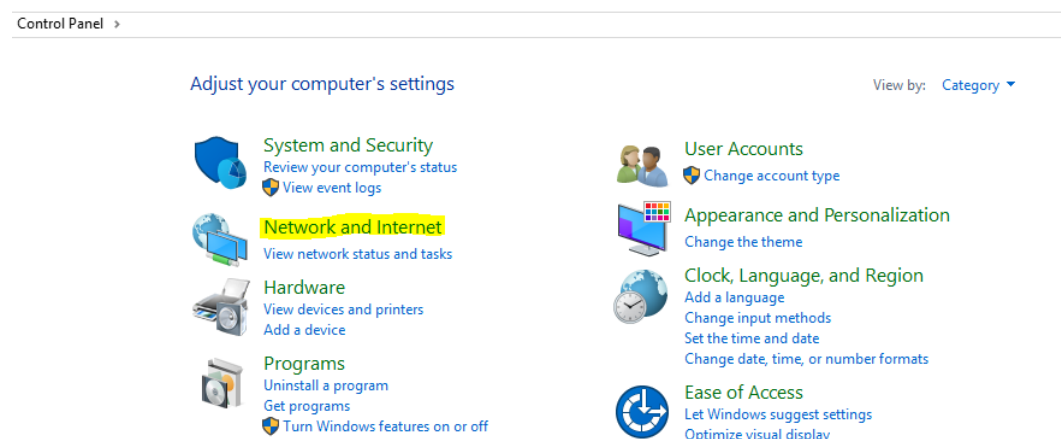

Rajib found a solution on the internet. The problem was related to the security settings within internet properties. This is an easy fix, and I wanted to share Rajib's solution.
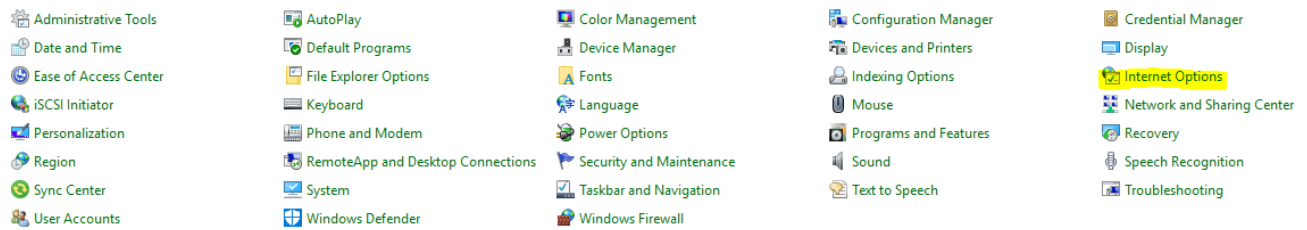

From the SCCM server open the control panel, click Network and Internet

Click Internet Options
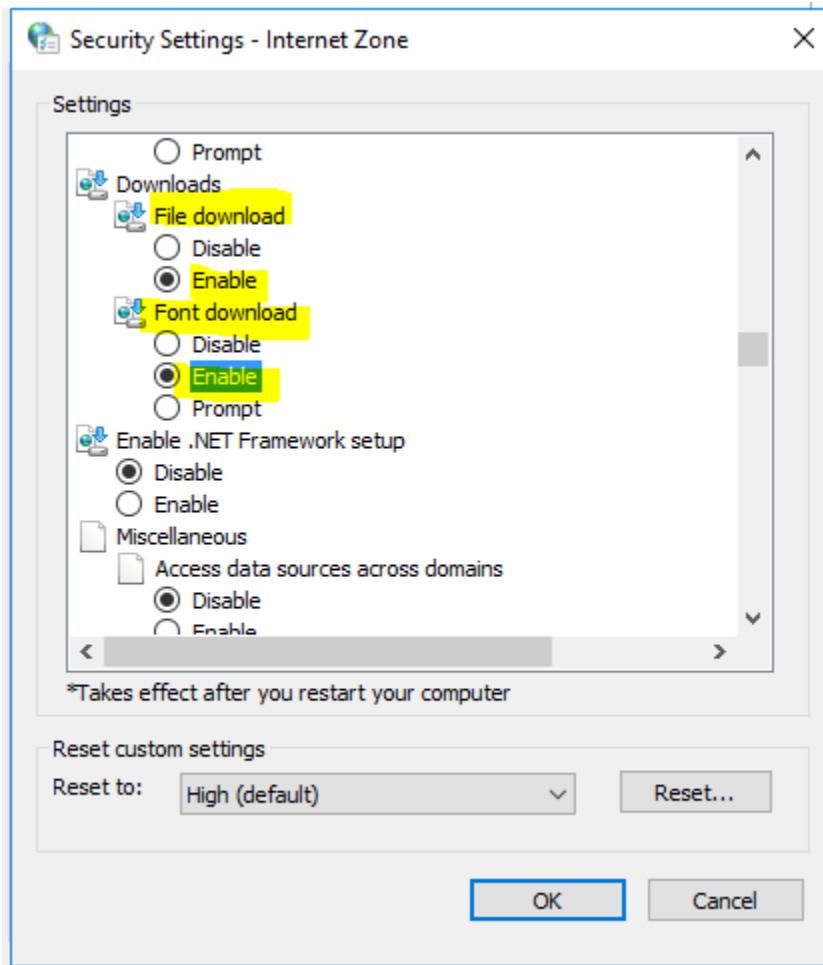

Adjust your computer's settings

View by: Small icons ▼

Administrative Tools	AutoPlay	Color Management	Configuration Manager	Credential Manager
Date and Time	Default Programs	Device Manager	Devices and Printers	Display
Ease of Access Center	File Explorer Options	Fonts	Indexing Options	Internet Options
iSCSI Initiator	Keyboard	Language	Mouse	Network and Sharing Center
Personalization	Phone and Modem	Power Options	Programs and Features	Recovery
Region	RemoteApp and Desktop Connections	Security and Maintenance	Sound	Speech Recognition
Sync Center	System	Taskbar and Navigation	Text to Speech	Troubleshooting
User Accounts	Windows Defender	Windows Firewall		

Click Security, then click Custom Level

Scroll down until you see Downloads, file and font download, enable both of these.

Click ok, click yes at the warning. Now click ok. And now you can download ADK without further problems.

Special thanks to Rajib for submitting his question, and most of all for submitting his solution.

This solution can also be viewed at this web site -
